

IntelliPlex™ ALK Rearrangement Kit

The IntelliPlex™ ALK Rearrangement Kit is a qualitative molecular assay for the detection of clinically actionable gene rearrangements of the ALK gene. A total of 24 rearrangements can be identified in a single well by using πCode™ MicroDisc and one-step RT-PCR technologies.

SINGLE-WELL MULTIPLEXING

πCode™ technology enables multiplexing with ease. Each πCode™ MicroDisc has a distinct image pattern and is coupled to a unique probe, allowing the capture and detection of multiple targets in a single well.
