

IntelliPlex™ EGFR Mutation Kit

The IntelliPlex™ EGFR Mutation Kit is a qualitative molecular assay for the detection of clinically actionable somatic mutations on exons 12 and 18-21 of the EGFR gene. A total of 40 mutations can be identified in a single well by using πCode™ MicroDisc and SelectAmp PCR technologies.

SINGLE-WELL MULTIPLEXING

πCode™ technology enables multiplexing with ease. Each πCode™ MicroDisc has a distinct image pattern and is coupled to a unique probe, allowing the capture and detection of multiple targets in a single well.
