

IntelliPlex™ ROS1 Rearrangement Kit

The IntelliPlex™ ROS1 Rearrangement Kit is a qualitative molecular assay for the detection of clinically actionable gene rearrangements of the ROS1 gene. A total of 14 rearrangements can be identified in a single well by using π Code™ MicroDisc and one-step RT-PCR technologies.

SINGLE-WELL MULTIPLEXING

π Code™ technology enables multiplexing with ease. Each π Code™ MicroDisc has a distinct image pattern and is coupled to a unique probe, allowing the capture and detection of multiple targets in a single well.
